

Founded: 2009

Headquarters: Carlsbad, CA

Team Members: Approximately 300

Devices Sold: >10,000

Treatments: >25 million with no adverse events reported

Patents: 17 U.S. & International

Regulatory: FDA Cleared Class II medical devices

Overview

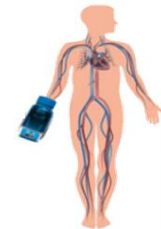

AVACEN (Advanced Vascular Circulation Enhancement) Medical (www.avacen.com) is a leading provider of FDA Cleared, drug-free, noninvasive treatments for pain relief and management, wellness, as well as diagnostics for cardiovascular disease and stress. Our heat therapy systems for pain relief were developed while working with research scientists at a leading research university. They are FDA Cleared Class II medical devices indicated for: (1) minor muscle pain (2) joint pain and stiffness (3) joint pain associated with arthritis (4) muscle spasms (5) minor strains and sprains (6) muscle relaxation, and (7) temporary increase of local circulation.

Problem

Chronic pain impacts 116 million people in the U.S. alone - more than cancer, diabetes and heart disease combined. With up to a 70% higher mortality risk and 40 million enduring severe pain, it is a debilitating condition. To make matters worse, opioids are often used as a first line of treatment, with 143 million prescriptions in the U.S. in 2020. However, with over 13 million abusing drugs like Oxycodone, and over 100,000 deaths per year from opioids, drug-free alternatives are being sought out. Considering only 23% of patients found opioids effective for treating chronic pain, and 88.5% of chronic pain sufferers aren't satisfied using drugs for treatment, drug-free treatments are a viable alternative.*

Mechanism of Action

AVACEN uses the palm of hand as a noninvasive portal into the circulatory system. By continuously applying heat and negative pressure leveraging the patented AVACEN Treatment Method technology, the blood is warmed, reducing viscosity while maintaining vasodilation, both increasing microcirculation. Oxygenation and nutrition delivery increase to the tissues, and CO₂ and waste removal improve. Muscular relaxation increases and widespread pain is reduced.

Awards & Recognition

1. Pain Management Technology Manufacturer of the Year (2023)
2. Inc. 5000 Fastest Growing Companies (2020-2023) & Top 50 Health Product Company (2023)
3. Global Health & Pharma Patient-Centric Pain Relief Breakthrough Technology of the Year (2022)
4. MedTech Outlook Top 10 Pain Management Device Company (2022)
5. State of California Innovation Awards (2022)
6. Frost & Sullivan New Product Innovation Award (2017)
7. San Diego World Trade Center Award (2016)
